## Manufacturer's Information Test No. 23-5904/5: Probabilistic Genotyping

Each sample set consisted of two known bloodstains provided on either white fabric or  $FTA^{TM}$  Micro Cards (Items 1 and 2), and two questioned stains on colored fabric (Items 3 and 4). Participants were requested to analyze these items using their existing protocols.

SAMPLE PREPARATION: The substrates for Items 1, 2, and 3 were prepared using human whole blood which was either drawn into citric acid preservative bags or EDTA tubes. The substrates for Item 4 were prepared using a mixture of human whole blood and semen. The white fabric known bloodstains were spotted with 50 µL of sample and the FTA™ Micro Card known bloodstains were spotted with 75 µL of sample. Item 1 was created using blood from a female donor. Item 2 was created using blood from a male donor. Item 3 was created by combining one part blood from the Item 1 female donor and one part blood from another female whose known standard was not provided. Item 4 was created by combining three parts blood from the Item 1 female donor and two parts semen from the Item 2 male donor. The items were prepared at separate times and were packaged once they were thoroughly dried. Completed sample sets were stored at -20°C until shipment on August 14, 2023.

SAMPLE SET ASSEMBLY: For each sample set, all Items (1-4) were packaged into separate envelopes and then placed together in a pre-labeled sample set envelope and sealed. The sealed sample set envelopes were then packaged in pre-labeled heat seal envelopes and sealed. This process was repeated until all of the sample sets were prepared.

VERIFICATION: All predistribution laboratories confirmed the manufacturer's expected associations. Consistent allelic results were reported for all STR and YSTR data.

## Key to Test Substrates

5904 - Cloth Swatches 5905 - FTA™ Micro Cards

The information presented here is that received from the sample manufacturer. It presents details of the design specification for the test samples and/or details of how they were prepared. This information does not necessarily represent the results that should or could be obtained from an examination of the sample. Final interpretation of the results should be deferred until the summary report is available.
